

USC Care Medical Group Value Based Care Update

APPD September 2018

- Describe the state of value-based care and population health in your market?
 - In the LA market this concept is controlled by entities like HCP not a lot of direct impact to USC/Keck except we are now responsible for developing pop health tools for the USC faculty/staff and their family even though we only serve about 1/3 of this population in LA

- How is your faculty practice preparing for value-based care and population health?
 - We are implementing the Optum tools for pop health on the USC lives that are self-insured. Go Live is planned soon.

- Do you participate in or own a Clinically Integrated Network (CIN)? How is it structured?
 - No CIN yet but trying to identify the right partners to build around our faculty and facilities.

- How important are these initiatives to the overall strategic direction of the practice?
 - Very important for our survival but hard to put together.

- Does your practice participate in an Accountable Care Organization(s)? Describe the model(s) and your practice's level of participation.
 - No aco's or minimal we are so TQ that it is hard to get in.

- What is your practice's stance on MACRA and other Medicare initiatives in this area?
 - We are going the MIPS route given the minimal primary care we havesee slide on our MIPS results in appendix.

- Can you identify specific successes or unique areas of focus within your practice that highlight engagement by your faculty/leadership in managing at risk populations.
 - We are optimizing our EHR tools to engage the faculty to assist in managing at risk populations for smoking cessation, chf and diabetes.
 - Our Ortho Dept/providers have fully engaged in the Medicare program for joint replacement. We continue to work through the downstream care needs given the geography of our patient population.

- Has your institution established data sets, dashboards and/or metrics to achieve success in managing an at risk population(s)?
 - Yes via Cerner but more development needed.

- What other strategic factors are guiding your decisions and investments in value-based care and population health?
 - Helping USC to reduce/maintain the cost of healthcare and new primary care relationships that are striving to reduce the long term cost of care.
- See attached reference material.
